

## Total Fleet Solutions from CCS

CCS provides access to a wide range of vehicles to suit your diverse operational needs. From cars and 4x4s to light and heavy commercial vehicles, minibuses and coaches. Our solutions can build the vehicles to suit your operational needs, such as grounds maintenance, street scene and waste management or simple light bar and internal racking.

We have used our expertise, experience and market knowledge to develop a range of leading commercial agreements for you to choose from.

### The base vehicle

Our [Vehicle Purchase](#) framework comprises 48 suppliers representing all vehicle brands available in the UK market, both current and future developed.

This means you can access the right chassis for your specific requirements, such as road sweepers, vans with racking, passenger carrying minibuses, refuse collection, winter maintenance vehicles, tractor units or rigid chassis

All fuel trains are available including full availability of electric, alternatively fueled and other ultra-low emission vehicles.

You are able to contract directly with the manufacturers for specialist, non-standard conversions which they may undertake in-house, or subcontract to appropriate specialists. Either way, you can obtain the "one-stop-shop" solution for vehicles via the RM6060 agreement.

Our agreements provide access to discounts rates off manufacturers' prices which are on average 10% above what the average fleet buyer achieves.

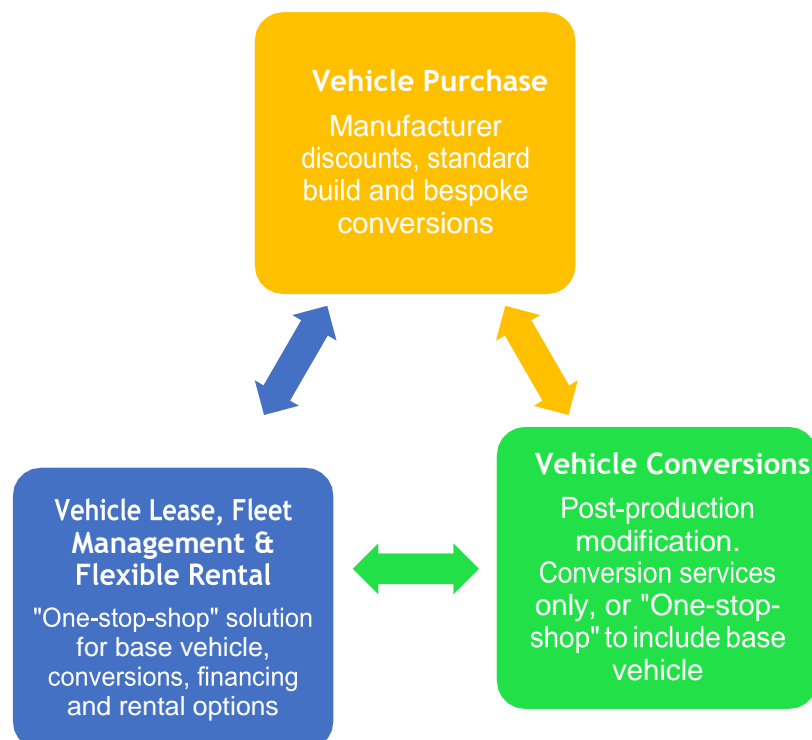

### Bespoke conversions

Alternatively, you may wish to commission your own vehicle modification. You can either free-issue a chassis to a converter or enable them to provide the "one-stop-shop" solution by sourcing the base vehicle on your behalf whilst still accessing the CCS market leading discounts.

Whatever your unique vehicle design, the CCS [Vehicle Conversions Dynamic Purchasing System](#) (DPS) has a full range of suppliers to meet your needs.

**The DPS is flexible in design and use;** new suppliers can apply to join at any point ensuring that the right suppliers are available to meet your needs.

**Design your contract to best suit you;** from simple racking, lining or electrical installations to complex vehicle modifications to support your individual operational needs; the DPS can provide access to the right suppliers for you.

Within the conversions DPS you can use a simple filtering tool which shows suppliers organised by:

## Geography

## Sector

## Vehicle Type

## Service Types

## Product and sub-product

Service Types available include:

- Design, consultancy and advisory services
- Standalone conversion services

## Funding options

If you do not want to purchase your vehicles, the CCS [Vehicle Lease, Fleet Management and Flexible Rental Solutions](#) agreement enables you to contract hire or flexibly rent any vehicle size or type, whether they are of standard build or specially modified.

Our suppliers have extensive experience of commissioning vehicle modifications for operational fleets, delivering great commercial value and choice of funding options. By choosing this route to market, you will only need a single contract with the funding supplier. They will manage the rest of the supply chain on your behalf.

If you need your specialist vehicle with short notice, or would prefer greater flexibility with your contracts, then you can consider Lot 4 for flexible rental from 28 days and up to 2-years. Unlike contract hired vehicles, these are not built to order as suppliers have stocks of commonly required specifications, ready for deployment. If you need further modifications, or your own telematics or livery for example, no problem, as the supplier can also commission this and spread the cost over your rental.

Find more information on all of our agreements [here](#).
